

Search Checklist

Use this checklist to check how good your search function is and see what needs to be improved.

	I have a search box on every page of my site.
	The search box is easy to find.
	I've tested to see that when I search for items I carry, they always turn up in searches.
	When a search is performed and there are no results, a message similar to " <i>We found zero result for digital cameras</i> " appears.
	The search has a helpful autocomplete function.
	The search results are displayed in a list.
	The search results page shows no unnecessary information.
	In the search results page, the most important information is on the left.
	My site has relevant refinement options (if your site sells a big enough variety of merchandize to make this worthwhile)
